

About BIOCAD

BIOCAD is Russia's leading innovative biotechnology company which combines a world-class research and development center, ultra-modern pharmaceutical and biotechnology manufacturing facilities, and pre-clinical and clinical research infrastructure compliant with international standards.

BIOCAD is one of the few world's full-cycle drug development and manufacturing companies, doing everything from new molecules discovery and genetic engineering to large-scale commercial manufacturing and marketing support. BIOCAD's medicines are used to treat the most complex health conditions, such as cancer, HIV and Hepatitis C infections, multiple sclerosis and other disorders.

The company employs about 1000 people, 300 out of them scientists and researchers. In 2014 BIOCAD's sales tripled and reached \$200 million, while total amount of long-term international contracts exceeded half a billion US dollars. BIOCAD has subsidiaries in the US, Brazil, China, India, Singapore, and other countries.
